

HHVBF: O(s) growth of the longitudinal amplitude depends on the gauge away from $CV = 1$

Feynman gauge: asymptote (dotted) = $\kappa |C_{2V} - 1|$

Unitary gauge: asymptote (dotted) = $\kappa |C_{2V} - C_V^2|$

— $(CV, C_{2V}) = (1, 2)$
— $(CV, C_{2V}) = (2, 1)$
— $(CV, C_{2V}) = (2, 4)$
— $(CV, C_{2V}) = (1.5, 2.25)$
